Lead *Web3* Frontend Engineer — *Web3* Fintech & Payments

Location: Remote / Poland (International Team)
Employment Type: Full-time / Contract
Reports To: Head of Engineering / Chief Technology Officer
Level: Lead Engineer (Hands-on Technical Leadership)

About the Company

Plaid is a financial technology company that provides infrastructure connecting financial applications with banks and financial institutions. Its technology supports secure financial data access, account verification, identity verification, and payment services.

Separately, we are planning to establish a new software development company in Poland, focusing on fintech, payment infrastructure, and *blockchain*-based financial products.

Our planned projects cover real estate marketplaces, gaming, sports betting, and *Web3* social finance platforms. We aim to combine traditional financial technologies with *blockchain* infrastructure to support digital payments, *wallet* integrations, transaction processing, *smart contract*s, and decentralized financial services.

We are building an international engineering team and looking for experienced engineers who can help establish our technical foundation, guide development, and contribute directly to building our products.

About the Role

We are looking for an experienced **Lead *Web3* Frontend Engineer** to lead the architecture, development, and delivery of frontend applications for our *Web3* fintech and payments products.

This is a hands-on technical leadership position combining frontend engineering, *Web3* integrations, architecture ownership, and engineering mentorship.

You will work closely with backend engineers, *blockchain* developers, product designers, and product managers to build secure, scalable, and user-friendly financial applications.

Your responsibilities will include developing *wallet*-connected applications, *blockchain* transaction interfaces, payment dashboards, and reusable frontend infrastructure.

You will also guide frontend engineers, review code, establish development standards, and contribute to important technical decisions.

We are looking for someone who can take ownership of complex frontend challenges while remaining actively involved in development.

This is not a purely managerial role. Writing production code and solving technical problems are central responsibilities.

What You'll Do

Frontend Architecture & Development

- Lead the development of modern web applications using React, Next.js, and TypeScript.
- *Defi*ne frontend architecture, component structure, state management, and application design patterns.
- Build scalable, maintainable, and reusable frontend systems supporting multiple financial products.
- Develop complex user interfaces for financial transactions, payment management, *wallet* operations, and digital assets.
- Establish reusable component libraries, shared frontend utilities, and consistent application patterns.
- Improve frontend performance, responsiveness, accessibility, and user experience.
- Develop reliable integrations with REST APIs, GraphQL services, WebSockets, and backend systems.
- Design efficient approaches for client-side data management, caching, loading states, and error handling.
- Contribute directly to coding, debugging, testing, and delivering production frontend features.

Web3 & *Blockchain* Integrations

- Design and develop *wallet*-connected applications supporting *EVM*-compatible *blockchain* networks.
- Implement *wallet* integrations using Wagmi, Viem, *Eth*ers.js, *Wallet*Connect, or similar technologies.
- Build interfaces for *cryptocurrency* transfers, digital asset management, payments, and transaction tracking.
- Integrate frontend applications with *Solidity smart contract*s and *blockchain* backend services.
- Implement transaction signing, *wallet* authorization, network switching, and *blockchain* transaction status handling.
- Develop interfaces for deposits, withdrawals, settlement, refunds, and transaction histories.

- Support cross-chain transaction interfaces and *blockchain* integrations where required.
- Handle transaction confirmation states, failed transactions, *wallet* disconnections, and *blockchain* network errors.
- Work with *blockchain* engineers to ensure *smart contract* interactions are secure and reliable.
- Improve usability around complex *blockchain* operations while keeping users informed about transaction status and risks.

Fintech & Payments Applications

- Build frontend features supporting traditional payment services and *blockchain*-based financial transactions.
- Develop financial dashboards, account management interfaces, and transaction monitoring tools.
- Integrate frontend applications with payment APIs, authentication services, and identity verification systems.
- Build clear user experiences for payment initiation, authorization, transaction confirmation, and reconciliation.
- Work with backend engineers to design secure frontend-to-backend communication.
- Ensure sensitive financial information is handled appropriately in frontend applications.
- Build consistent financial workflows across desktop and mobile web environments.

Technical Leadership

- Lead frontend architecture and development across assigned products.
- Guide frontend engineers through technical design, implementation, and problem-solving.
- Review pull requests and maintain high code quality.
- Mentor engineers and support their professional development.
- Help plan engineering tasks, estimate complexity, and identify technical risks.
- Collaborate with product managers and designers to translate business requirements into technical solutions.
- Coordinate with backend and blockchain teams to define APIs and integration requirements.
- Establish frontend coding standards, documentation practices, and review processes.
- Improve engineering productivity through reusable tools, automation, and development workflows.
- Participate in technical interviews and help evaluate frontend engineering candidates.
- Remain actively involved in hands-on coding and implementation.

Testing, Security & Reliability

- Establish testing standards for frontend applications and Web3 integrations.
- Develop unit, integration, and end-to-end tests using Jest, Vitest, Playwright, Cypress, or similar tools.
- Implement testing strategies for wallet connections, transaction execution, and blockchain-related workflows.
- Ensure frontend applications handle loading, error, empty, and unexpected states reliably.
- Follow secure coding practices to reduce risks involving authentication, authorization, and sensitive data.
- Prevent common frontend vulnerabilities, including XSS and unsafe handling of user-controlled data.
- Collaborate with security engineers to review wallet authorization and transaction-signing experiences.
- Establish monitoring and error-tracking practices using Sentry or similar tools.
- Support CI/CD processes and reliable frontend deployments.

Required Skills & Experience

- 7+ years of professional frontend or full-stack software development experience.
- 3+ years of substantial professional experience developing Web3 applications or blockchain-connected frontend systems.
- Proven experience leading frontend development, mentoring engineers, or owning frontend architecture.
- Strong expertise in **React, Next.js, TypeScript, and JavaScript**.
- Deep understanding of frontend architecture, component design, state management, and modern web development practices.
- Experience developing production applications that interact with Ethereum or EVM-compatible blockchain networks.
- Strong experience with Wagmi, Viem, Ethers.js, Web3.js, WalletConnect, or similar Web3 libraries.
- Practical understanding of wallet connections, transaction signing, smart contract interactions, and blockchain transaction lifecycles.
- Familiarity with Solidity contract ABIs and integrating smart contracts into frontend applications.
- Experience with modern state management and data-fetching tools such as Redux, Zustand, TanStack Query, or equivalent technologies.
- Strong knowledge of REST APIs, GraphQL, WebSockets, and asynchronous application workflows.
- Experience building responsive, accessible, and performance-optimized web applications.
- Strong understanding of web security fundamentals and secure frontend development practices.

- Experience with Git, code reviews, CI/CD, and automated testing.
- Ability to design maintainable codebases and independently solve complex engineering problems.
- Experience working with backend engineers, blockchain developers, designers, and product teams.
- Strong technical communication skills and experience working in international teams.

Nice to Have (Differentiators)

- Previous experience in fintech, payments, banking, DeFi, or digital asset platforms.
- Experience developing decentralized exchanges, cross-chain applications, staking interfaces, or DeFi dashboards.
- Familiarity with blockchain bridges, token swaps, liquidity routing, and cross-chain messaging.
- Experience integrating applications with Arbitrum, Optimism, Base, Polygon, zkSync, or other EVM-compatible networks.
- Experience building financial applications involving deposits, withdrawals, settlement, or tokenized assets.
- Knowledge of account abstraction, EIP-4337, smart wallets, and modern wallet infrastructure.
- Experience with Safe wallets, multisignature transactions, or advanced transaction authorization workflows.
- Familiarity with wallet security, transaction simulation, approval management, and phishing prevention.
- Experience with The Graph, blockchain indexers, or on-chain data APIs.
- Understanding of smart contract development with Solidity and Hardhat or Foundry.
- Experience with monorepo architectures using Turborepo, Nx, or similar tools.
- Familiarity with design systems, Storybook, Tailwind CSS, and modern component libraries.
- Experience developing mobile-friendly Web3 applications or integrating wallets into React Native applications.
- Knowledge of frontend observability, performance metrics, and production monitoring.
- Experience establishing frontend development standards for early-stage technology companies.
- Open-source contributions to React, TypeScript, Web3 libraries, or developer tools.

Lead-Level Expectations

As Lead Web3 Frontend Engineer, you will be expected to:

- Take ownership of frontend architecture and technical quality across assigned applications.

- Make important technical decisions affecting frontend scalability, performance, security, and maintainability.
- Combine hands-on engineering responsibilities with technical leadership and mentorship.
- Establish consistent development standards and reusable frontend infrastructure.
- Guide engineers through complex Web3 integration and frontend architecture challenges.
- Work closely with backend and blockchain teams to design reliable integration patterns.
- Identify technical risks early and help the team address them before production deployment.
- Support engineering planning, technical reviews, and delivery coordination.
- Improve the team's development workflows and engineering productivity.
- Stay actively involved in production code, debugging, testing, and complex feature implementation.

This is a hands-on leadership role. Formal people management may be part of the position as the team grows, but strong technical ownership and practical engineering experience are the primary requirements.

Example Problems You'll Work On

1. Wallet-Connected Financial Applications

Develop applications that allow users to connect wallets, view digital assets, authorize transactions, and interact with blockchain-based financial services.

Ensure wallet connections, network switching, authentication, and transaction signing are reliable and understandable.

2. Blockchain Payment Interfaces

Build user interfaces for initiating, tracking, and managing digital asset payments.

Display transaction states, network fees, confirmations, and errors clearly while integrating with backend transaction services.

3. Cross-Chain Transaction Experiences

Develop interfaces supporting token transfers and swaps across supported blockchain networks.

Handle bridge integrations, estimated transaction costs, network differences, and transaction progress.

4. Financial Dashboards

Create dashboards for payment history, wallet balances, transaction monitoring, and settlement information.

Integrate real-time updates and backend APIs to provide accurate financial information.

5. Shared Frontend Architecture

Establish reusable components, wallet integration libraries, authentication patterns, and UI frameworks that can be shared across multiple products.

Reduce duplicated code while maintaining flexibility for different product requirements.

6. Secure Transaction Authorization

Work with blockchain and security engineers to design safe transaction approval experiences.

Help users understand what they are signing and prevent confusing or unsafe authorization flows.

7. Web3 Gaming and Social Finance

Build wallet-connected interfaces supporting digital asset transactions, user profiles, rewards, and blockchain-related financial functionality.

Adapt frontend architecture to support different product experiences without unnecessarily duplicating infrastructure.

8. Frontend Performance and Reliability

Optimize complex financial applications for responsiveness, loading speed, accessibility, and production stability.

Establish automated tests and monitoring that help engineers identify issues before they affect users.

Why This Role Matters

As we establish our planned software development operations in Poland, frontend engineering will be essential to making complex financial and blockchain technologies accessible to users.

Our products will involve payments, wallets, digital assets, and interactions between traditional financial systems and blockchain networks.

The Lead Web3 Frontend Engineer will help define how these technologies are presented through secure, reliable, and intuitive applications.

This role offers substantial ownership of frontend architecture, Web3 integrations, engineering standards, and technical delivery.

You will contribute directly to production development while helping other engineers build scalable and maintainable applications.

We are looking for an engineer who combines **deep React and TypeScript expertise, practical Web3 development experience, strong architectural judgment, and hands-on technical leadership**.

Our goal is to create financial applications where complex blockchain functionality feels straightforward, reliable, and secure for everyday users.
