Senior *DeFi* & *Blockchain* Engineer — *Smart Contract*s & Financial Infrastructure

Location: Remote / Poland (International Team)
Employment Type: Full-time / Part-time / Contract
Department: *Blockchain* Engineering / Financial Infrastructure
Reports To: Lead *Blockchain* Engineer / Head of Engineering
Level: Senior

ABOUT THE ROLE

We are looking for an experienced, hands-on **Senior *DeFi* & *Blockchain* Engineer** to help design, develop, and maintain secure *blockchain* applications and decentralized financial infrastructure.

Our engineering initiatives focus on fintech, digital asset *trading*, decentralized exchanges (*DEX*s), *blockchain* payments, stable*coin* transactions, asset *token*ization, and *Web3* financial applications.

In this role, you will work on production-grade *smart contract*s, *DeFi* integrations, transaction processing systems, and *blockchain*-connected backend services.

You will collaborate with *blockchain* engineers, backend developers, infrastructure specialists, and product teams to build reliable systems that connect decentralized protocols with real-world financial applications.

We are looking for an engineer who understands both *smart contract* development and the backend infrastructure required to operate *blockchain* applications in production.

This is a hands-on engineering role with opportunities to contribute to architecture, technical decisions, security reviews, and development standards.

WHAT YOU'LL DO

Smart Contract Development

- Design, develop, test, and deploy secure *smart contract*s using *Solidity*.
- Build contracts supporting digital asset transfers, payments, escrow, staking, and financial settlement.
- Develop and integrate ERC-20, ERC-721, and other relevant *token* standards.

- Implement contract access controls, upgrade mechanisms, and administrative functions.
- Optimize *smart contract*s for security, gas efficiency, and maintainability.
- Write comprehensive unit, integration, fuzz, and invariant tests using Foundry, Hardhat, or similar tools.
- Participate in *smart contract* code reviews and security assessments.

DeFi Protocols & Financial Applications

- Develop and integrate decentralized finance protocols and financial applications.
- Work with decentralized exchanges, liquidity pools, *token swap*s, staking systems, and yield-related integrations.
- Build reliable transaction execution and settlement workflows.
- Integrate liquidity providers, price feeds, *blockchain* oracles, and third-party *DeFi* protocols.
- Help implement financial transaction validation and reconciliation mechanisms.
- Investigate failed transactions, duplicate submissions, inconsistent states, and *blockchain* confirmation issues.
- Contribute to financial infrastructure supporting both on-chain and off-chain operations.

Blockchain Backend & Integrations

- Develop backend services that interact with *smart contract*s and *blockchain* networks.
- Integrate *wallet*s, RPC providers, *blockchain* APIs, and transaction signing services.
- Build event listeners, *blockchain* in*dex*ers, and transaction monitoring services.
- Develop APIs supporting balances, transaction histories, asset transfers, and settlement status.
- Implement asynchronous processing and event-driven workflows for *blockchain* transactions.
- Work with databases and caching systems to maintain reliable application state.
- Support multi-chain integrations across *EVM*-compatible networks.

Security & Reliability

- Identify common *smart contract* vulnerabilities, including reentrancy, access control issues, oracle manipulation, and transaction-related exploits.
- Follow secure coding practices for financial transactions and digital asset management.
- Implement appropriate validation, authorization, and transaction verification mechanisms.
- Collaborate with security engineers and external auditors to resolve identified vulnerabilities.
- Improve monitoring, error handling, logging, and incident investigation.
- Help maintain reliable *blockchain* services under production workloads.
- Participate in technical reviews and improve system resilience.

Engineering Collaboration

- Work closely with frontend and backend developers on *blockchain*-connected financial applications.
- Participate in system design discussions and architectural reviews.
- Review code and provide constructive technical feedback.
- Document *smart contract* behavior, APIs, financial workflows, and integration requirements.
- Support junior and mid-level engineers when needed.
- Collaborate with distributed engineering teams to deliver secure, maintainable products.

REQUIRED SKILLS & EXPERIENCE

- 4+ years of professional software engineering experience, including significant hands-on *blockchain* development.
- S*tron*g experience with *Solidity* and *Ethereum* Virtual Machine (*EVM*) *smart contract*s.
- Practical experience developing, testing, and deploying *smart contract*s.
- Familiarity with Foundry, Hardhat, or equivalent *smart contract* development frameworks.
- Experience working with *Ethereum* and *EVM*-compatible networks.
- Understanding of *DeFi* protocols, decentralized exchanges, digital assets, and *token* standards.
- S*tron*g knowledge of *blockchain* transactions, gas fees, event logs, confirmations, and contract interactions.
- Experience integrating *smart contract*s with backend applications.
- Proficiency in at least one backend language such as TypeScript, Go, *Rust*, or Python.
- Experience with REST APIs, asynchronous processing, and database-backed services.
- Understanding of transaction consistency, reliability, and error handling.
- Familiarity with *smart contract* security practices and common vulnerabilities.
- Experience using Git, automated testing, CI/CD, and collaborative development workflows.
- Ability to independently investigate technical issues and deliver production-quality solutions.
- Good communication skills and the ability to work effectively in a remote team.

NICE TO HAVE (DIFFERENTIATORS)

- Experience with *Uniswap*, *Aave*, Curve, Compound, or similar *DeFi* protocols.
- Experience developing AMMs, liquidity aggregation, staking, lending, or yield strategies.
- Knowledge of cross-chain messaging, bridges, and interoperability protocols.
- Experience with stable*coin* payments, *crypto* payment gateways, and settlement infrastructure.
- Familiarity with account abstraction (ERC-4337), multisig *wallet*s, MPC custody, or *wallet* security.

- Experience with *blockchain* in*dex*ers, The Graph, or custom event-processing services.
- Knowledge of Layer-2 networks, rollups, and *blockchain* scaling solutions.
- Experience with *token*ized real-world assets (RWA) and asset ownership systems.
- Familiarity with on-chain and off-chain order matching.
- Experience using fuzz testing, invariant testing, or formal verification techniques.
- Understanding of *smart contract* auditing processes and protocol security.
- Experience with Docker, Kubernetes, cloud infrastructure, and production observability.
- Previous experience in fintech, *cryptocurrency* exchanges, or digital asset infrastructure.

EDUCATION

- Bachelor's degree in Computer Science, Software Engineering, Information Technology, or a related field, or equivalent practical experience.
- Contributions to *blockchain* open-source projects, technical research, or independently developed production applications are valued.

WHAT SUCCESS LOOKS LIKE

First 3 Months

- Understand the existing *blockchain* architecture, financial workflows, and development practices.
- Contribute to core *smart contract* and backend integration tasks.
- Identify security, reliability, and performance improvements.
- Participate actively in code reviews, testing, and architectural discussions.

Within 6 Months

- Independently deliver production-ready *smart contract*s and *blockchain* integrations.
- Improve transaction handling, monitoring, and settlement reliability.
- Strengthen automated testing and *smart contract* security practices.
- Collaborate effectively across *blockchain*, backend, and product teams.

Long-Term

- Become a *trust*ed technical contributor to critical *DeFi* and financial infrastructure.
- Help improve system scalability, contract security, and protocol integrations.
- Contribute to important architectural decisions and engineering standards.
- Support the development of reliable *blockchain*-based financial products.

WHY JOIN US?

- Work on challenging engineering problems involving decentralized finance and digital asset infrastructure.
- Contribute to products involving *smart contract*s, payments, *trading*, and *blockchain* integrations.
- Take meaningful ownership of production systems and technical implementations.
- Collaborate with an international team of software and *blockchain* engineers.
- Work with modern *blockchain* technologies and financial infrastructure architectures.
- Participate in architecture discussions and help shape engineering best practices.
- Enjoy flexible remote collaboration with full-time, part-time, and contract opportunities.
- Continue developing your expertise in *DeFi* protocols, *blockchain* security, and distributed financial systems.

IDEAL CANDIDATE

The ideal candidate is an experienced *blockchain* engineer who enjoys building secure and reliable financial applications.

You have strong Solidity development skills and understand how DeFi protocols operate beyond the smart contract layer. You are comfortable developing backend integrations, investigating blockchain transactions, and handling complex financial workflows.

You care about security, testability, performance, and maintainable code. You can work independently, collaborate with other engineers, and take responsibility for delivering production-ready solutions.

Most importantly, you enjoy solving practical engineering challenges and want to contribute to the development of modern decentralized financial infrastructure.
