Frontend Software Engineer — Fintech & *Web3* Applications

Location: Remote / Poland (International Team)
Employment Type: Full-time / Part-time / Contract
Department: Product Engineering / Frontend Development
Reports To: Frontend Lead / Engineering Manager
Level: Mid-Level / Senior

About the Company

We are exploring opportunities to expand engineering capabilities at **Plaid**, focusing on modern fintech applications, payment infrastructure, digital asset platforms, and *blockchain*-based financial products, including potential collaboration with a Poland-based engineering team.

Our engineering interests include secure payment applications, digital asset management, *cryptocurrency wallet*s, decentralized exchanges, and *Web3* integrations.

We value engineers who enjoy building reliable, user-friendly applications and working closely with backend, *blockchain*, product, and design teams.

About the Role

We are looking for a **Frontend Software Engineer — Fintech & *Web3* Applications** to help design, develop, and maintain modern web applications for financial technology and *blockchain*-connected products.

This is a hands-on engineering role focused on creating responsive, secure, and scalable frontend experiences using **React, Next.js, and TypeScript**.

You will work on financial dashboards, transaction interfaces, payment workflows, *wallet* integrations, and user-facing application features.

The ideal candidate has s*tron*g frontend development experience, understands modern API integrations, and is interested in building financial products with excellent performance and usability.

Prior *Web3* experience is valuable but not required for candidates with s*tron*g frontend engineering fundamentals.

What You'll Do

Frontend Application Development

- Design and develop modern web applications using React, Next.js, and TypeScript.
- Build reusable UI components and maintain scalable frontend architecture.
- Develop responsive interfaces for desktop, tablet, and mobile browsers.
- Implement financial dashboards, transaction histories, account management, and payment workflows.
- Integrate frontend applications with REST and GraphQL APIs.
- Manage application state using React Query, Zustand, Redux, or similar tools.
- Optimize application performance, loading speed, and rendering efficiency.
- Maintain accessible, consistent, and intuitive user experiences.

Fintech & Payment Applications

- Develop user interfaces for financial accounts, payments, and transaction management.
- Build transaction forms, payment status displays, and confirmation workflows.
- Integrate payment APIs and third-party financial services.
- Implement secure authentication and authorization experiences.
- Handle API errors, loading states, retries, and transaction failures.
- Collaborate with backend engineers to ensure accurate financial data presentation.
- Build clear interfaces for sensitive financial operations.
- Support responsive dashboards displaying balances, payment activity, and analytics.

Web3 & *Blockchain* Integration

- Develop interfaces for *blockchain*-connected financial applications.
- Integrate *cryptocurrency wallet* connections where required.
- Work with libraries such as *eth*ers.js, viem, wagmi, or similar tools.
- Support *token* balance displays, transaction history, and asset management.
- Build interfaces for decentralized applications, *trading* platforms, and digital asset operations.
- Integrate *smart contract* interactions through secure frontend workflows.
- Handle *wallet* connection states, network changes, and transaction confirmations.
- Collaborate with *blockchain* engineers to improve usability and transaction reliability.

UI/UX & Product Collaboration

- Work closely with product designers to implement Figma designs.
- Translate product requirements into maintainable frontend components.
- Improve existing application interfaces based on user feedback.
- Build and maintain shared component libraries and design systems.
- Ensure consistent visual behavior across browsers and screen sizes.

- Participate in feature planning, technical discussions, and product reviews.
- Identify opportunities to simplify complex financial workflows.
- Contribute to frontend architecture and UI/UX improvements.

Testing, Security & Performance

- Write unit and integration tests using Jest, Vitest, or React Testing Library.
- Develop end-to-end tests using Playwright or Cypress.
- Debug frontend issues and resolve production defects.
- Apply secure frontend development practices.
- Protect sensitive user information through appropriate client-side handling.
- Avoid exposing private keys, credentials, or confidential data.
- Implement proper error handling and validation.
- Participate in code reviews and maintain clean, well-documented code.
- Support CI/CD workflows and reliable application deployments.
- Monitor frontend errors and performance using tools such as Sentry.

Required Skills & Experience

- 3+ years of professional frontend or full-stack software development experience.
- S*tron*g hands-on experience with React and TypeScript.
- Practical experience developing applications with Next.js.
- S*tron*g understanding of JavaScript, HTML5, and CSS3.
- Experience building responsive and reusable UI components.
- Familiarity with Tailwind CSS, CSS Modules, or comparable styling approaches.
- Experience integrating REST APIs and handling asynchronous operations.
- Understanding of frontend state management and modern React patterns.
- Knowledge of authentication, authorization, and secure frontend development.
- Experience with Git and collaborative software development.
- Ability to write automated frontend tests.
- Understanding of browser performance, debugging, and optimization.
- S*tron*g communication and problem-solving skills.
- Ability to work independently within a distributed engineering team.

Nice to Have (Differentiators)

- Experience developing fintech, banking, payment, or *cryptocurrency* applications.
- Familiarity with *Web3* libraries such as wagmi, viem, and *eth*ers.js.
- Experience integrating *MetaMask*, *Wallet*Connect, or similar *wallet*s.
- Understanding of *Ethereum*, *EVM*-compatible networks, and *blockchain* transactions.
- Experience with Stripe or other payment service integrations.
- Knowledge of decentralized exchanges, *DeFi*, or digital asset management.
- Experience with React Native or Expo.

- Familiarity with Node.js, Express.js, or NestJS.
- Experience with Firebase, PostgreSQL, or backend-as-a-service platforms.
- Familiarity with Storybook and frontend design systems.
- Experience using Docker, GitHub Actions, or cloud deployment platforms.
- Understanding of accessibility standards and SEO optimization.
- Experience with WebSocket-based real-time applications.
- Familiarity with financial charts and data visualization libraries.

Education

- Bachelor's degree in Computer Science, Software Engineering, Information Technology, or a related field.
- Equivalent professional experience and demonstrated engineering skills are equally valued.
- Relevant personal projects, open-source contributions, and production application experience are appreciated.

What Success Looks Like

First 3 Months

- Become familiar with the frontend architecture, development processes, and product requirements.
- Understand the financial workflows and backend integrations.
- Deliver production-quality frontend features.
- Contribute reusable UI components and automated tests.
- Establish effective collaboration with frontend, backend, and design teams.

Within 6 Months

- Take ownership of important frontend application features.
- Deliver reliable payment, financial dashboard, or *Web3* integration workflows.
- Improve frontend performance, maintainability, and testing coverage.
- Contribute to architectural improvements and shared components.
- Help reduce UI defects and improve the user experience.

Long-Term

- Help build scalable and maintainable financial applications.
- Support expansion into additional payment and *blockchain* integrations.
- Improve frontend development standards and reusable architecture.
- Contribute ideas that improve product usability and engineering efficiency.
- Become a dependable contributor to the frontend engineering team.

Why Join Us?

- Work on modern fintech and *Web3* application development.
- Contribute to payment infrastructure, financial dashboards, and digital asset products.
- Gain experience with *blockchain* integrations and financial technology.
- Work with modern frontend technologies such as React, Next.js, and TypeScript.
- Collaborate with an international engineering team.
- Enjoy flexible remote working and collaboration arrangements.
- Take ownership of meaningful features from planning through deployment.
- Develop your technical skills while contributing to secure financial applications.

Ideal Candidate

We are looking for a practical, detail-oriented frontend engineer who enjoys building clean and reliable user interfaces.

You should be comfortable developing React applications, integrating backend APIs, writing maintainable TypeScript code, and resolving complex frontend issues.

Experience with fintech or blockchain applications is welcome, but strong software engineering fundamentals, attention to detail, and a willingness to learn are equally important.

The ideal Frontend Software Engineer combines strong React and TypeScript skills, a product-focused mindset, secure development practices, and an interest in modern financial and Web3 applications.
